Art Unit: 1773

1. The following is an examiner's statement of reasons for allowance: the closest prior art reference, Takeda et al (USPN 6,319,613), teaches a coating solution for heat radiation shielding comprising fine particles of a hexaboride of La, Y, Ce and others as instantly claimed, and fine particles of ITO or ATO, and further comprising a binder and dispersant in amounts and particle sizes that fall within the instantly claimed ranges wherein the binder may be an acrylate or polyester resin containing additives. Takeda et al also teach that a dispersant and a coupling agent, such as a silane coupling agent, may be utilized to improve the stability of the dispersed fine particles in the solution, such as in water or organic solvent. Takeda et al do not teach or render obvious that the coupling agent or dispersant is a polymer dispersant as instantly claimed and selected from the group consisting of polyacrylate dispersants, polyurethane dispersants, polyether dispersants, polyester dispersants and polyester-urethane dispersants.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Monique R. Jackson whose telephone number is 571-272-1508. The examiner can normally be reached on Mondays-Thursdays, 8:00AM-4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carol Chaney can be reached on 571-272-1284. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
